

iPulse i200 Product Update

CyDen is committed to ongoing product improvement. We have discussed with many of you the benefit of extended lamp life in the market place and we have taken your views very seriously. We are delighted to announce, therefore, that from the 1st August we are introducing our new 5000 shot lamp, replacing the current 3500-shot product.

This development allows a cost per shot reduction of 5% whilst providing almost 43% increased life. We continue to have one of the most competitive costs per cm² treated.

We will not stop there. Our development programme is well advanced in our efforts to further increase lamp life and reduce overall operating cost. We expect to be in a position to report more progress in the months to come.

Thank you for your continued support of iPulse.
